## CREW CHIEF HERB NAB PICKS S-K® TOOLS FOR HIS "NASCAR-CREW OF THE YEAR"!

**When bringing home the bacon depends on tools to match  
the skill and speed needed to win . . . you pick the best!**

Racing mechanics are perfectionists. They've got to be good day in and day out. A mistake in judgment, or a few seconds wasted can make the big difference between pay day and pay out. To make a living, they've got to be good. And Herb Nab is one of the greatest of the Great Ones.

Biggest all-time NASCAR winner, Nab has racked up 21 super speedway races. In 1969, Herb and his crew won 7 major events, the Daytona 500, the Rebel 400 at Darlington, the World 600 at Charlotte, the Firecracker 400 at Daytona, the Dixie 500 at Talladega, the Southern 500 at Darlington and the American 500 at Rockingham. Anybody who wins like that has got to be one of the best, truly a Great One.

Herb Nab knows that winning races can depend on tools that

translate the speed and skill of his mechanics. That's why he picked the finest—S-K Tools.

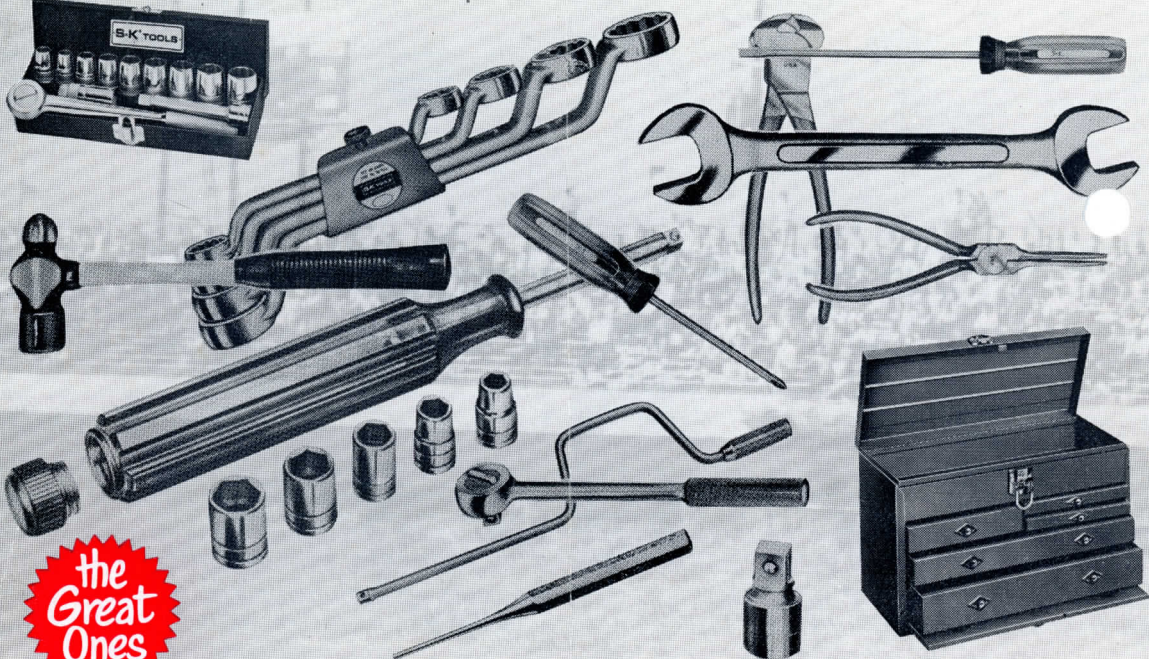

But racing mechanics aren't the only ones who really depend on tools. All tool using professionals—mechanics, maintenance men, service repair men, machinists . . . anyone who makes a living with tools should demand tools that match their skill—S-K Tools. Even non-professional handymen or hobbyists owe it to themselves and their work to get the best available . . . S-K Tools, chosen by the Great Ones as the pick of the pros.

## **S-K® TOOLS WITH BUILT-IN DEPENDABILITY**

Why do pros like Herb Nab pick S-K Tools? Because when your living depends on tools, you want tools you can depend on.

S-K Tools have built-in dependability that will never let you down. Dependability born from the quality inherent in the design and manufacturer of these superior tools. All stages of manufacturing are carefully controlled to assure quality. The biggest ingredient in S-K Tools is care.

Whatever operation is required to produce a tool, care is the watchword. Forged, machined, tempered, heat treated, filled, ground, polished, assembled, whatever the step, it is carefully, accurately, precisely performed. Quality is assured and with it comes dependability.

## S-K® RATCHET

Conventional ratchets are made on the principle of a shearing action and thus require large drive gear teeth, limiting the number of teeth and positions. Operating in a large arc of from 10° to 20°, such ratchets have a 5° to 10° back movement. (See Fig. B). Not so with an S-K ratchet.

S-K ratchets are positive, close acting—an asset in tight work situations. Exclusive design insures that 3 teeth of the pawl are always engaged while the ratchet is in use. This superior concept allows S-K Ratchets to operate in a smaller arc, from 5.1° to 9° with virtually no back movement. (Fig. A). They are quality built, forged from a superior alloy steel, carefully machined to exacting tolerances and polished to a high luster finish, S-K Ratchets look, feel and work in a way that tells you that this is a quality tool. They are the best ratchets made.

### SIMPLIFIED MAINTENANCE

To increase the life of your ratchet, it is advisable to periodically

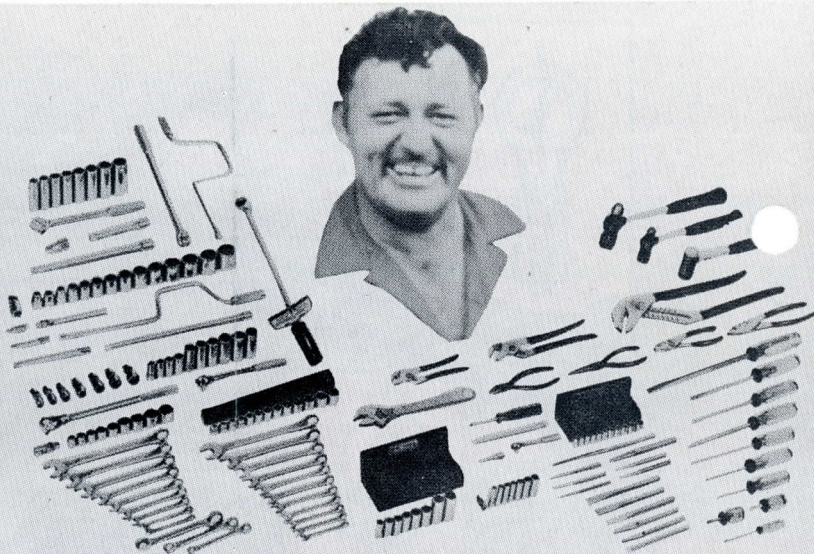

remove the operating mechanism and wash out accumulated grease and grit, with a cleaning solvent. No lubricant is needed to assure proper performance.

Place ratchet in neutral (C) and compress snap ring with a screwdriver or thin bent nose plier (D). With snap ring compressed, strike back smartly against a solid surface (E). Mechanism should pop out easily.

To replace mechanism, set it in neutral (F) and insert in handle. Hold cap in place. Put snap ring in position (G). Compress snap ring and seat in handle (H).

### RATCHET RENEWALS

If after long use you notice your ratchet mechanism is worn, you can get a ratchet renewal mechanism from your local tool source, it's simple and easy to replace.
